Application No.: 10/605,325

AMENDMENTS

In The Claims

1. (currently amended) A liquid crystal display, comprising:
 - two substrates, being spaced apart in parallel;
 - an enclosed wall structure, provided in between said two substrates, wherein the enclosed wall structure and said two substrates form a first enclosed space, wherein said enclosed wall structure is not used for adhering said two substrates;
 - a sealant, formed outside said enclosed wall structure between said two substrates, wherein said sealant and said two substrates form a second enclosed space, wherein said sealant is only formed on one of said two substrates;
 - a liquid crystal layer, formed in said first enclosed space between said two substrates; and
 - at least a thin film transistor, being formed in said first enclosed space on one of said two substrates.
2. (original) The liquid crystal display as recited in claim 1, wherein said enclosed wall structure comprises a conductive wall.
3. (previously presented) The liquid crystal display as recited in claim 2, wherein said conductive wall serves to conduct said two substrates.

Customer No.: 31561
Docket No.: 11467-US-PA
Application No.: 10/605,325

4. (presently amended) The liquid crystal display as recited in claim 1, wherein a plurality of conductive walls for conducting said two substrates are provided on said substrate that has said thin film transistors, wherein the conductive walls are located within the first enclosed space.

5-7. (cancelled)

8. (original) The liquid crystal display as recited in claim 1, wherein said sealant comprises a light hardening adhesive.

9-27. (cancelled)

28. (new) The liquid crystal display of claim 28, wherein the sealant is formed only on the one of said two substrate with said enclosed wall.
